

Reviewer Comment:

Reviewer 1

R1R1

Comments 1: The authors have satisfactorily addressed all the previous concerns. The revised manuscript is now suitable for publication.

Response R1R1

Response 1: We sincerely thank the reviewer for their time, thorough evaluation of our revisions, and positive final assessment. We greatly appreciate the constructive feedback provided throughout the review process, which has significantly enhanced the clarity and overall quality of our manuscript.

Reviewer 2

R2R1

Comments 1: The authors' response has addressed all of my previous concerns. However, before publication, I recommend that the authors further improve the quality of the figures throughout the manuscript. Several figures are presented in relatively low resolution (e.g., Figs. 1, 2, and 3), while others contain text that is too small to read comfortably (e.g., Figs. 2, 3, 8, 9, and 10). I encourage the authors to review all figures, replace raster images with vector graphics wherever possible, and increase the font size so that it is comparable to the main text (ideally no more than 2 pt smaller).

Response R2R1

Response 1: We thank the reviewer for the positive assessment of our previous revisions and for this valuable recommendation. We have comprehensively reviewed and updated figures across both the main manuscript and the supplementary material. We have replaced images with high-resolution vector graphics wherever possible. Additionally, we have adjusted the typography within Figures 2, 3, 8, 9, and 10, increasing the font sizes to ensure they are clearly legible.
